

IN THE CLAIMS

Please amend the claims as follows:

Claims 1-13 (canceled)

Claim 14 (new): An information storage medium configured to have data recorded thereon and data reproduced therefrom by an information recording/reproducing apparatus, said data including control information and video object data, the information storage medium comprising:

a data area configured to store:

the video object data, and

a plurality of error correction code blocks, wherein a predetermined number of sectors form each error correction code block, and each of said sectors has a predetermined size; and

a control information recording area configured to store said control information, the control information being configured to manage the video object data and including an AV file information table having a first table area configured to store object stream information, and a second table area configured to store AV file information configured to manage information of the video object data, the AV file information including a plurality of object information, each object information including information of object units of the video object data, and a plurality of object information search pointers associated with the plurality of object information, wherein:

said video object data is configured to be recorded in at least one of the object units,

an object corresponding to the video object data is allocated with or corresponds to one or more of the plurality of error correction code blocks,

an error correction code block address being defined in units of the error correction code block corresponds to an integer multiple of said sectors,

each object information included in said AV file information includes time map information including time map general information, one or more time entries, and one or more data unit entries, and

said time map general information includes information indicating a time offset of the time map information.

Claim 15 (new): An information recording method for recording information on an information storage medium including:

a data area configured to store:

video object data, and

a plurality of error correction code blocks, wherein a predetermined number of sectors form each error correction code block, and each of said sectors has a predetermined size, and

a control information recording area configured to store control information for managing the video object data, the control information including an AV file information table having a first table area configured to store object stream information, and a second table area configured to store AV file information configured to manage information of the video object data, the AV file information including a plurality of object information, each object information including information of object units of the video object data, and a plurality of object information search pointers associated with the plurality of object information, wherein:

said video object data is configured to be recorded in at least one of the object units,

an object corresponding to the video object data is allocated with or corresponds to one or more of the plurality of error correction code blocks,

an error correction code block address being defined in units of the error correction code block corresponds to an integer multiple of said sectors,

each object information included in said AV file information includes time map information including time map general information, one or more time entries, and one or more data unit entries, and

said time map general information includes information indicating a time offset of the time map information,

the information recording method comprising:

recording the object into the data area; and

recording the control information, including the plurality of object information, into the control information recording area.

Claim 16 (new): An information reproducing method for reproducing information recorded on an information storage medium that includes,

a data area including:

video object data, and

a plurality of error correction code blocks, wherein a predetermined number of sectors form each error correction code block, and each of said sectors has a predetermined size, and

a control information recording area including control information for managing the video object data, the control information including an AV file information table having a first table area including object stream information, and a second table area including AV file information configured to manage information of the video object data, the AV file information including a plurality of object information, each object information including information of object units of the video object data, and a plurality of object information search pointers associated with the plurality of object information, wherein:

said video object data is recorded in at least one of the object units,

an object corresponding to the video object data is allocated with or corresponds to one or more of the plurality of error correction code blocks,

an error correction code block address being defined in units of the error correction code block corresponds to an integer multiple of said sectors,

each object information included in said AV file information includes time map information including time map general information, one or more time entries, and one or more data unit entries, and

said time map general information includes information indicating a time offset of the time map information,

the information reproducing method comprising:

reproducing the video object data from the data area; and

reproducing the control information, including the plurality of object information, from the control information recording area.

Claim 17 (new): An information reproducing apparatus for reproducing information recorded on an information storage medium that includes

a data area including:

video object data, and

a plurality of error correction code blocks, wherein a predetermined number of sectors form each error correction code block, and each of said sectors has a predetermined size, and

a control information recording area including control information for managing the video object data, the control information including an AV file information table having a first table area including object stream information, and a second table area including AV file information configured to manage information of the video object data, the AV file information including a plurality of object information, each object information including

information of object units of the video object data, and a plurality of object information search pointers associated with the plurality of object information, wherein:

said video object data is recorded in at least one of the object units,

an object corresponding to the video object data is allocated with or corresponds to one or more of the plurality of error correction code blocks,

an error correction code block address being defined in units of the error correction code block corresponds to an integer multiple of said sectors,

each object information included in said AV file information includes time map information including time map general information, one or more time entries, and one or more data unit entries, and

said time map general information includes information indicating a time offset of the time map information,

the information reproducing apparatus comprising:

a first reproducer configured to reproduce video object data from the data area; and

a second reproducer configured to reproduce the control information, including the plurality of object information, from the control information recording area.
